

EXPERIENCE

United Parcel Service (UPS) <i>Corporate PLC Obsolescence Supervisor (Hybrid)</i>	Ontario, California, USA <i>April 2024 - Present</i>
◦ Project Leadership and PLC Programming: Led the HSLA conversion project to address obsolete controllers running on serial communications. Developed and modified standard PLC programs to resolve compatibility issues. Created a Vijeo Designer HMI program for legacy HMIS5T Magelis Panels to ensure compatibility with Studio 5000. ◦ Legacy Equipment Upgrades: Upgraded 200+ 1768-L45 controllers to CompactLogix 5069-L320ER nationwide, addressing PLC obsolescence and eliminating unsupported equipment that posed security risks. ◦ Escalation and Technical Support: Provide fourth-level escalation support for discontinued PLC platforms, resolving ladder logic, I/O, and communications failures through remote and onsite troubleshooting.	
<i>Automation Engineering Specialist (Promoted Internally)</i>	<i>October 2021 - April 2024</i>
◦ Network Troubleshooting and Design: Led the remapping of the automated network to ensure reliable connectivity by redrawing the ring network in AutoCAD Electrical. ◦ Conveyor System Retrofit: Independently integrated jam detection sensors into existing conveyor systems, optimizing performance without requiring PLC code changes. ◦ Electromechanical Design: Collaborated with industrial engineers to design and deploy a cost-effective electro-mechanical oiler circuit across 29 systems.	
<i>Control Room PT Supervisor (Promoted Internally)</i>	<i>July 2021 - October 2021</i>
◦ Operations Support and Troubleshooting: Acted as liaison between operations, union mechanics, and technicians during live sort operations. Monitored HMIs to identify fault trends, analyzed causes of operational downtime, and facilitated troubleshooting.	
<i>Operations Hub PT Lead (Promoted Internally)</i>	<i>July 2020 - July 2021</i>
◦ Team Leadership and Execution: Led a team in high-volume hub operations, overseeing staffing, safety communication, and daily operational execution to ensure efficiency and productivity.	

CURRENT PROJECTS

- **Automated PLC Firmware Upgrade Tool:** Developed a python-based tool to automate the firmware conversion and disaster recovery process of multiple PLC controllers, reducing the process time by 70%. Tech: Python, C#, Logix Designer SDK, ControlFlash+ API
- **Self-Hosted Hypervisor:** Configured a Debian homelab server to host virtual machines within tailnet vpn and publicly hosted domain using reverse proxy and custom DNS. Tech: Bash, CLI, Proxmox VE, LXC / Docker Containers

SKILLS SUMMARY

Languages:	Python, C, Ladder Logic, PLC Structured Text, LaTeX
PLC Tools:	Logix Designer SDK, RSLogix 500, Studio 5000, ControlFlash+ API
HMI Tools:	FactoryTalk View, Vijeo Designer
Workspaces:	Linux CLI, Windows, GIT, GitHub, VS Code
Technical Skills:	Electrical Troubleshooting, Oscilloscopes, Digital Multimeter (DMM)
Soft Skills:	Leadership, Project Management, Technical Documentation, Innovation, Team Collaboration

EDUCATION

California Polytechnic State University <i>Master in Electrical Engineering (M.S.) Specialization: Control Systems</i>	Pomona, California, USA <i>(In Progress)</i>
◦ Courses: Numerical Modeling, Advanced Robotics	
<i>Bachelor in Electrical Engineering (B.S.) Specialization: Control Systems and Robotics</i>	<i>(Completed)</i>
◦ Courses: Advanced Control Systems, Robotics, Machine Learning, RF Electronics	
Riverside City College <i>Associate in Mathematics and Science (A.S.)</i>	Riverside, California, USA <i>(Completed)</i>
<i>Bachelor in Social and Behavioral Studies (A.A.)</i>	<i>(Completed)</i>

CERTIFICATIONS

Rockwell Automation Learning+	
• CCP146 L1: ControlLogix 5000 System Fundamentals • CCP151 L2: Basic Ladder Logic Programming • CCP153 L2: ControlLogix Maintenance • CCCL21 L3: Basic Ladder Logic Interpretation	• CCP143 L3: Project Development • CCP154-EL L4: STL and SFC Programming • CCP152 L4: Function Block Programming
